PROFILE

Cybersecurity MSc student at Northumbria University with hands-on experience in network security, firewall hardening, and vulnerability reduction across production environments. Brings a security-first mindset shaped by real-world incident investigation and access-control design. Familiar with OWASP Top 10 attack vectors — including XSS, SQLi, and CSRF — and their mitigations. Eager to apply AI-native curiosity and a builder's instinct to protect Internet-scale infrastructure at Cloudflare.

EDUCATION

MSc Cybersecurity Technology (Security & Risk Management) Northumbria University, London	Sep 2024 – Present
MBA Business Analytics Coimbatore Institute of Management and Technology, India	Jun 2022 – May 2024

CERTIFICATIONS

CompTIA A+ (in progress) | ISO 27001 Lead Awareness | GDPR Awareness

PROFESSIONAL EXPERIENCE

Network Administrator

Idea Edu Technologies Pvt Ltd, India May 2024 – Apr 2025

- Designed and enforced VLAN segmentation, firewall rule-sets, and network access controls across 3 sites, reducing simulated unauthorised-access incidents by ~30% — directly applying defence-in-depth and least-privilege principles from the OWASP framework.
- Triaged 50+ daily network alerts and performed root-cause analysis on security events, cutting recurring incidents by ~30% within 3 months through systematic threat investigation and remediation.
- Administered Windows Server 2016 and Windows 10 endpoints; managed patch compliance and endpoint hardening to maintain 99% uptime across critical infrastructure.
- Produced weekly incident-analysis reports for senior management covering 100+ events, improving security response efficiency by ~20% through data-driven insight.
- Coordinated with 4+ vendors via ticketing system, reducing mean time-to-resolution by ~15% and ensuring security SLAs were consistently met.

Junior Business Analyst (Internship)

Idea Edu Technologies Pvt Ltd, India Jun 2023 – Jan 2024

- Mapped process and security gaps across 3 departments, producing BRD, FRD, and SRS documentation that cut deployment errors by ~20%.
- Built Excel dashboards and KPI reports for 10+ stakeholders, improving process efficiency by 15% over 6 months.

PROJECT EXPERIENCE

Enterprise Network & Security Design — Cisco Packet Tracer Academic Project

Northumbria University, London Jan 2025

- Architected a multi-site enterprise network with VLAN segmentation, stateful firewall rules, and layered access controls across 4 departments, reducing simulated attack surface by 30%.
- Applied OWASP threat-modelling principles and defence-in-depth strategies to identify and mitigate common attack vectors (privilege escalation, lateral movement) in the simulated environment.
- Documented security design decisions and control rationale — mirroring real-world security engineering deliverables.

TECHNICAL SKILLS

Security	OWASP Top 10, XSS / SQLi / CSRF mitigations, firewall hardening, VLAN segmentation, network access control, vulnerability analysis, defence-in-depth, endpoint protection
Programming & Scripting	Python (scripting, automation), Bash; exposure to C concepts; learning Go
Networking	TCP/IP, DNS/DHCP, Cisco Packet Tracer, firewall rule design, incident investigation, root-cause analysis
Systems & Platforms	Windows Server 2016, Windows 10, Microsoft 365, IoT systems
Compliance & Reporting	ISO 27001 awareness, GDPR awareness, audit documentation, KPI/incident reporting
